

## 10V Input, 500mA, High Speed LDO Regulators

### ■ GENERAL DESCRIPTION

XC6231 series are highly precise, low noise, positive voltage LDO regulators which features high ripple rejection and low dropout. Output voltage is selectable within a range of 0.9V ~ 5.5V. The series is also compatible with low ESR ceramic capacitors which give added output stability. This stability can be maintained even during load fluctuations due to the excellent transient response of the series. The current limiter's foldback circuit operates as a short-circuit protection as well as the output current limiter for the output pin.

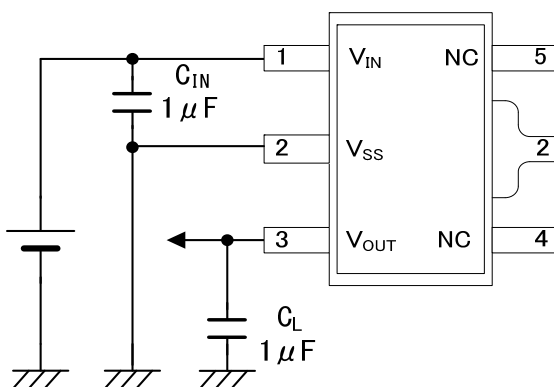

### ■ APPLICATIONS

- Reference voltage sources
- Multi-function power supplies

### ■ FEATURES

<b>Maximum Output Current</b>	: 500mA (600mA limit) ( $2.5V \leq V_{OUT} \leq 5.5V$ )
<b>Dropout Voltage</b>	: 200mV @ 100mA
<b>Operating Voltage Range</b>	: 2.0V ~ 10.0V
<b>Output Voltage Range</b>	: 0.9V ~ 5.5V (0.1V increments)
<b>Output Voltage Accuracy</b>	: $\pm 2\%$
<b>Temperature Coefficient</b>	: $\pm 100\text{ppm}/^\circ\text{C}$ (TYP.)
<b>Low Power Consumption</b>	: 35 $\mu\text{A}$ (TYP.)
<b>High Ripple Rejection</b>	: 65dB @ 10kHz
<b>Protection circuits</b>	: Current Limiting
<b>Low ESR Capacitor</b>	: Ceramic Capacitor Compatible
<b>Operating Ambient Temperature</b>	: -40 $^\circ\text{C}$ ~ +85 $^\circ\text{C}$
<b>Package</b>	: SOT-89-5
<b>Environmentally Friendly</b>	: EU RoHS Compliant, Pb Free

(<sup>(3)</sup>)  $V_{OUT(E)}$ : Effective output voltage value.

(The output voltage when an amply stabilized " $V_{OUT(T)}+1.0\text{V}$ " is provided at the  $V_{IN}$  pin while maintaining a certain  $I_{OUT}$  Value).

(<sup>(4)</sup>)  $V_{dif}$  is defined as follows:  $V_{dif}=\{V_{IN1}-V_{OUT1}\}$ .

•  $V_{OUT1}$ : 98% of output voltage when  $V_{IN}$  is input after stabilizing sufficiently at each  $I_{OUT}$ .

•  $V_{IN1}$ : As input voltage is gradually reduced, the input voltage at which  $V_{OUT1}$  is output.

## ■ OPERATIONAL EXPLANATION

The XC6231 series controls the output voltage, divided by resistors R1 & R2 which are connected to the V<sub>OUT</sub> pin is compared with the internal reference voltage by the error amplifier.

The P-channel MOSFET connected to the V<sub>OUT</sub> pin, is then driven by the subsequent output signal. The output voltage at the V<sub>OUT</sub> pin is controlled & stabilized by negative feedback.

The current limit circuit and short protect circuit operate in relation to the level of output current.

### <Low ESR Capacitors>

With the XC6231series regulator, a stable output voltage is achievable even if low ESR capacitors are used, as a phase compensation circuit is built-in to the regulator. In order to ensure the effectiveness of the phase compensation, we suggest that an output capacitor (C<sub>L</sub>) be connected as close as possible, between the output pin (V<sub>OUT</sub>) and the V<sub>SS</sub> pin. Please use an output capacitor (C<sub>L</sub>) with a capacitance, based on the chart below. We also suggest an input capacitor (C<sub>IN</sub>) of 1μF : this should be connected between V<sub>IN</sub> and V<sub>SS</sub> in order to stabilize input power source.

Output Capacitor Corresponding Chart

V <sub>OUT</sub>	C <sub>L</sub>
0.9 ~ 1.2V	More than equal to 4.7μF
1.3 ~ 1.7V	More than equal to 2.2μF
1.8 ~ 5.5V	More than equal to 1.0μF

### <Current Limiter, Short-Circuit Protection>

XC6231series regulator offers a combination of current limit and circuit protection by means of a built-in fixed current limiter circuit and a foldback circuit. When the load current reaches the current limit level, the fixed current limiter circuit operates and output voltage drops. As a result of this drop in output voltage, the foldback circuit operates, the output voltage drops further and output current decreases. When the output pin is shorted, a current of about 50mA flows.

## ■ NOTES ON USE

- 1) Please use this IC within the stated absolute maximum ratings. The IC is liable to malfunction should the ratings be exceeded.
- 2) Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current. Please strengthen V<sub>IN</sub> and V<sub>SS</sub> wiring in particular.
- 3) Please wire the input capacitor (C<sub>IN</sub>) and the output capacitor (C<sub>L</sub>) as close to the IC as possible.  
Should rapid input fluctuation or load fluctuation occur, please increase the capacitor value such as C<sub>IN</sub> or C<sub>L</sub> to stabilize the operation.
- 4) Torex places an importance on improving our products and its reliability.  
However, by any possibility, we would request user fail-safe design and post-aging treatment on system or equipment.

## ●SOT-89-5 Power Dissipation

Power dissipation data for the SOT-89-5 is shown in this page.  
The value of power dissipation varies with the mount board conditions.  
Please use this data as the reference data taken in the following condition.

### 1. Measurement Condition

Condition: Mount on a board  
Ambient: Natural convection  
Soldering: Lead (Pb) free  
Board: Dimensions 40mm×40mm (1600mm<sup>2</sup> in one side)  
Copper (Cu) traces occupy 50% of the board area in top and back faces  
Package heat-sink is tied to the copper traces.  
Material: Glass Epoxy (FR-4)  
Thickness: 1.6mm  
Through-hole: 5 x 0.8 Diameter
